Education

Istanbul University-Cerrahpasa | Istanbul, Turkey

(2020-Expected September 2025)

Computer Science.

Experience

GoLive

| **İstanbul, Turkey**

(August-September 2024)

Intern (Full-time)

- Developed a RAG project using Python with LangChain, Chainlit, OpenAI API & PyMuPDF libraries.
- Deployed the project on AWS EC2 using Docker.
- Implemented Continuous Integration/Continuous Deployment (CI/CD) pipelines with GitHub Actions to automate testing, building, and deployment processes.

Carbon Consulting

| **İstanbul, Turkey**

(December 2024-March 2025)

Intern (Part-time)

- Worked on an SAP-integrated HR chatbot for Microsoft Teams.
- Developed an automated test system using Selenium to validate the functionality of the chatbot, implementing robust test scenarios and error handling.
- Engineered prompt optimization solutions for LLM-based systems, improving on-behalf detection accuracy from 70.3% to 94.5% and creating context-aware datetime extraction prompts that dynamically incorporated relative time references, increasing accuracy from 44% to 70% with llama models.
- Created a multi-stage intent detection system to enhance user experience by accurately identifying user intentions in ambiguous scenarios.
- Performed comprehensive manual testing, documenting issues in GitLab and collaborating with cross-functional teams to ensure SAP integration functionality.
- Utilized technologies including Python, Selenium, Microsoft Teams API, Docker, Redis, Postman, and various LLM API integrations.

Projects

Advanced Document Processing & Retrieval System

(August-September 2024)

- Developed comprehensive Retrieval-Augmented Generation (RAG) solutions using Python, LangChain, and OpenAI's GPT models
- Created two complementary document processing interfaces: a Gradio UI with customizable NLP settings and FAISS-based vector search, and a Chainlit Chatbot with document-specific source referencing using Chroma vector storage. Implemented robust document handling for multiple formats (PDF, DOCX, TXT) with optimized chunking strategies.
- Engineered performance improvements through document caching and efficient embedding generation.
- Deployed solutions on AWS EC2 using Docker with CI/CD pipelines via GitHub Actions for automated testing and deployment.

Activities

IEEE (Institute of Electrical and Electronics Engineers) Society, Computer Science Subbranch

(September 2022 - January 2023)

Active Member

- Contributed to organizing events and workshops aimed at enhancing members' skills in computer science.

Skills

Languages: Turkish (*Native*), English (*Advanced*), French (*Beginner*)

Computer: Microsoft Office Applications (Word, PowerPoint, Excel), Data Science, Data Structures, Web Development, Game Development, Unity 2D/3D, Database Systems, Software Engineering, Programming Languages, Operating Systems, AWS, Docker, GitHub, GitHub Actions, Linux, Bash, Postman, GitLab, Botpress, Selenium

Programming Languages: Python, SQL, Java, C++, C#.
